# The Way Forward

## SAVING PRIVATE RHINO

The Saving Private Rhino initiative combines key focus areas for an aggressive, anti-poaching campaign

Please note: for security purposes, considerable information has been withheld.

### Substantial Rewards

1

Offer substantial rewards for information leading to an arrest. Rewards must exceed the poacher's potential share after accounting for team members, getaway drivers, smuggling expenses, processing, and middlemen markups.

## Stay Informed

2

Conduct financial intelligence gathering to aid in potential arrests. Information and inside-knowledge is key to staying one step ahead of poachers.

3

## High-Tech Protection

Implement advanced measures for protection, including financing and supplying electronic forewarning and CCTV surveillance equipment.

## Staff Training

4

Saving Private Rhino provides free cross-exposure and anti-poaching training for private game reserves across Africa, enabling lodge staff to maximise their capabilities and attain certification.

5

## Training Facilities

Our initiative involves establishing a fully accredited anti-poaching and game ranger training facility, approved by PSIRA, FGASA, and SASSETA. Expert instructors will lead comprehensive training for both career students and volunteer forces.

These trained teams, known as 'Green Force,' will be deployed nationwide, providing protection to reserves without the means to safeguard their rhino. They will be self-sufficient and capable of sustaining extended periods in the bush.

## Equipment & Resources

# 6

We aim to donate equipment and resources, both new and used, to game reserves in need. Through our social media and fundraising campaigns, we will gather donations such as electronic and alarm equipment, uniforms, weapons, transport, binoculars, night vision gear, veterinary supplies, first aid kits, handheld radios, tents, ration packs, fuel, and safes.

# 7

## Rapid Response Team

A nationwide rapid response team of multi-functional vets will be deployed to train lodge staff and respond to poached rhinos in their province. Additionally, they will continuously train all reserves in proactive and reactive anti-poaching techniques and crisis management. This daily response to poaching incidents will provide unprecedented veterinary, rehabilitation, and crime scene intelligence within two months.

The team will be fully equipped with tools such as prostheses, portable X-ray machines, fast-flowing drips for hydration, high-energy feed, and portable non see-through bomas to create a stress-free and safe operating environment for the vets and to avoid attracting other large mammals that could harm the rhino.

## Security Risk Analysis

8

Our team will analyse security risks for each reserve, provide guidance on hi-tech alarms, CCTV, and security staff screening. We will create a network with nearby farms for early warnings. Lodge staff will receive training in intelligence gathering, suspect recognition, crime-scene forensics, armed response, tracking, and basic veterinary assistance with recommended antidotes.

## Special Equipment

9

Saving Private Rhino is at the forefront of developing specialised equipment such as prosthetics, mechanical cradling, and deep-tissue massage machinery for injured rhinos.

Additionally, we've designed portable bomas to safeguard drugged and injured rhinos from threats of hypothermia, dehydration, and predators. Our innovations also ensure the safety of vets from other dangerous wildlife while operating.

# 10

## Cross-Border Awareness Campaign

We are launching a cross-border awareness campaign across various media platforms to dispel the myth of rhino horn's medicinal value. We aim to secure support by seeking endorsements from Asian celebrities and leaders.

Generous donations of equipment and limited funds have already been made by Aquila, corporates, and caring individuals to our non-profit. A significant awareness campaign is essential to urgently secure the sponsorship, funding, and donations required for this ambitious initiative.

# 11

## 24-Hour Control Room

Set up a 24-hour control room to receive forewarn alarm perimeter signals, monitor remote thermal motion detecting CCTV cameras, ensure the safety and efficiency of anti-poaching patrols, track GPS devices in rhino horns, and coordinate crisis management on a national scale.

## Tracking Devices

12

Implement GPS tracking for every individual rhino horn to monitor their location continuously. We aim to install microchips and trackers in as many rhinos' horns as possible. Dehorning will be carried out at the reserves' discretion.

13

## 24-Hour Hotline

Set up a 24-hour hotline for informants and a real-time website featuring the latest news, rewards, and information needed by the police. Our aim is to expose and publish pictures of convicted individuals and suspects to assist lodge security staff.

## Insurance

14

Establish affordable insurance options for rhino owners, allowing them to protect the breeding capacity of their herds in case of any losses. Once associated with us, reserves will find it easier to reinstate such insurance coverage.

15

## Deterrent Signboards

At reserve entrances, Saving Private Rhino displays warning signs and deterrent signboards emphasising the rhinos have 24-hour hi-tech electronic and armed security protecting them.

## Educate The Way Forward

16

At ARC (Aquila's Animal Rescue and Conservation Centre), we are creating a Rhino Rehabilitation and Educational Center. Our vision involves an anti-poaching educational facility where we will honour each fallen rhino by lighting a candle in their memory.
